

Disinfect

Disinfect

Surface disinfection (large surfaces)

Description

Definition/Objective	Apply the disinfectant using the appropriate cleaning textile to kill microorganisms and deactivate viruses . Suitable for clean, dry, water-resistant surfaces (e.g. floors).
Preparatory work	Select suitable products according to the surface to be cleaned (type/square metres) and the type of soiling.
	Put up the warning sign.
 	Clean the surface (e.g. ceiling, walls or floor) and then leave to dry. Disinfect infectious soiling first.
	Fill the bucket with disinfectant according to the dosing instructions.
 	Remove any loose dirt (dust-binding mopping or dry vacuum cleaning).
Main task	 Disinfect the surface using the pre-soaked or lightly wrung out mop in a single action, applying light pressure. Apply a sufficient amount of disinfectant. The entire surface must be thoroughly wetted . First disinfect along the edges of the room and under furniture, then disinfect the open space. Work backwards towards the exit in slightly overlapping lines.
	Observe the specified contact time of the disinfectant! Leave the surface to dry.
 	If needed: Rinse the surface with water, then soak up the water using a well-wrung-out mop or scrubber-dryer.
Final steps	Remove the warning sign once the surface is dry. Wash used textiles in the washing machine. Dispose of any waste. Clean the cleaning equipment and replace if necessary.
Comments	- Wear the personal protective equipment (PPE) required by company regulations, safety data sheets or operating instructions. - Always check in advance which product meets your requirements (see Wetrok Cleaning & Care Instructions). Wetrok AG assumes no liability for damage caused by improper use or incorrect product selection.
