Upheaval in the market for scrubber driers

## **The new Duomatic generation: A surge of innovation in the mid-range market**

**In the wake of the successful launch of their Duomatic Esprit in the second half of 2015, Wetrok has added the models Duomatic Intense, Endurer and Impulse to their portfolio of mid-sized scrubber driers. In line with the Wetrok motto “the right machine for the job”, this new generation of cleaning machines covers a broad spectrum of cleaning applications.**

Cleaning efficiency is the result of the targeted use of appropriate tools. That is why Wetrok has expanded their offering of mid-range scrubber driers. Customers can now choose from four models, each customised with specifications to match different requirements. Models are chosen according to the size of the area to be cleaned, the degree of soiling, the desired level of user comfort or specific hygienic requirements, e.g. in hospitals or laboratories.

### **One common factor: Innovation**

Each model from the new generation of Duomatic machines has its specific strengths. All of them, however, feature innovative elements that drive progress in cleaning technology and create tangible added value. A typical example for the innovative capacity at Wetrok is their patented Power Whirl nozzle technology: The Power Whirl suction bar is a common feature of all four machine models in the Duomatic product family. It dries the floor as it passes and requires very little energy. The three largest models furthermore share a large touchscreen colour display for intuitive operation, which makes tedious staff training sessions obsolete. Another communality is the upright handle, which can be height adjusted to suit the operator during operation. A patented parallelogram function ensures that the operator can see the screen display from every angle.

Ergonomics, sturdiness and longevity are just some of the quality characteristics Wetrok scrubber driers have always had and continue to have in the new generation of Duomatic products.

#### **Duomatic Esprit with automatic Touch'n'Clean function**

Duomatic Esprit is a compact and agile scrubber drier for daily use in small area environments. It comes equipped with a 55 litre tank and the Quick Refill system with hose coupling and automatic shut off for the fresh water supply. An automatic dosage system for chemicals is offered as an optional extra. The touch-sensitive and energy-efficient Touch'n'Clean handle is a unique Wetrok feature: The machine starts as soon as the operator touches the handle, and stops when it is released.

#### **Duomatic Intense for medium-sized areas**

This compact all-rounder features a 55 litre water tank for the efficient cleaning of offices, hallways and mid-sized sales, production and storage spaces. A Power Shot function for the quick removal of stubborn dirt, Quick Refill, an automatic dosage system for chemicals and easy brush organisation are all standard in the Duomatic Intense.

#### **Duomatic Endurer with 80 litre tank**

Duomatic Intense's big brother Endurer is similarly equipped in terms of technology, but is designed for large area cleaning. Despite its large volume water tank, this high performance machine is very compact in its design, agile and user-friendly. The optional lithium iron phosphate battery pack features short charging times and a lifespan to match that of the actual machine.

#### **Duomatic Impulse for sensitive cleaning environments**

Duomatic Impulse with the twin tank system is the perfect choice for applications, where high hygiene standards must be satisfied. The two tanks are easily accessible and can be effortlessly rinsed and cleaned. A contamination of the water is therefore virtually impossible. The integrated HEPA (High Efficiency Particulate Arrestance) filter prevents cross-contamination via the exhaust air.

Upheaval in the market for scrubber driers

## **The new Duomatic generation: A surge of innovation in the mid-range market**

In the wake of the successful launch of their Duomatic Esprit in the second half of 2015, Wetrok has added the models Duomatic Intense, Endurer and Impulse to their portfolio of mid-sized scrubber driers. All four new models share common innovative elements like the patented Power Whirl nozzle technology for drying while passing, a large touchscreen colour display with just six buttons for intuitive operation, and an upright handle that can be height adjusted during machine operation. Some of the standard and optional features include functions like the Quick Refill system for fresh water, an automatic dosage system, Power Shot function or brush handling with the push of a button. The compact and agile Duomatic Esprit comes with the unique Touch'n'Clean handle for automatic machine stop and go. Duomatic Intense is designed specifically for the cleaning of medium-sized areas, while Duomatic Endurer has the upper performance segment covered. Duomatic Impulse is the Wetrok specialist for hygiene-sensitive applications and comes with an easy to rinse twin tank system.
