

Duomatic Esprit - Full text

Wetrok Duomatic Esprit with Power-Whirl and Touch'n'Clean Technology

The new Duomatic Esprit scrubber drier machine makes maintenance cleaning quicker and more effective. The highlights of the innovative machine concept are the patent-pending Wetrok Power-Whirl for immediate drying of floors and the Touch'n'Clean handle for automatic start-stop operation.

Wetrok's product development is consistently geared towards professional cleaning practices. Ideas thrive on the basis of customer needs, careful analysis of the cleaning market and modern technologies. With the new Duomatic Esprit scrubber drier machine, Wetrok once again demonstrates how hands-on expertise is capable of bringing innovation and added value into daily cleaning routines.

Advanced suction nozzle technology provides for dryer floors with less power consumption

An example of innovation with high added value is the newly-developed Wetrok Power-Whirl. This suction nozzle technology, applied for the first time in the Duomatic Esprit, generates an optimally-controlled suction whirl that leaves the cleaned area absolutely dry with lower energy consumption. This leads to a better result and prevents cleaning personnel from leaving streaks on still-damp floors.

More cleaning efficiency thanks to high operating convenience

A totally new approach was also implemented in the area of operating safety: The Duomatic Esprit is steered with the ergonomically designed Touch'n'Clean handle. Once the machine is ready to go, the operator touches the handle, and the cleaning starts. To stop, the operator simply lets go of the handle again. This eliminates idle phases, which saves energy and extends the battery life until the next battery recharge. The user-friendliness is enhanced by the clearly-arranged user display with only four function keys. The upright handle is adjustable even during operation. Thanks to a parallelogram, there is always a perfect view of the function display. For easy brush replacement, the brush housing can be lifted and lowered at the push of a button.

Quick-Refill and optimal management of water and chemicals

With the 55-litre fresh water tank, this new all-rounder can handle long cleaning sessions in just one pass. In doing so, the built-in water pump provides for constant water dispensing. The machine is filled via Quick-Refill: an integrated hose coupling, which is compatible with a standard water hose. The water supply shuts off automatically once the fresh water tank is full. The Duomatic Esprit can also be supplied with an optional automatic dosage system for economical consumption of water and chemicals. This avoids using too much or too little of the cleaning formula.

Flexibility the use of personnel

The new Duomatic Esprit is a compact, manoeuvrable scrubber drier that achieves impeccable cleaning results with minimum use of resources. It requires no particular skills or special training to operate the machine. Brief instruction is sufficient. Thanks to the powerful self-drive for forward motion, even long cleaning sessions can be mastered without fatigue.

Duomatic Esprit – Short Version

Wetrok Duomatic Esprit with Power-Whirl and Touch'n'Clean Technology

The new, manoeuvrable Duomatic Esprit scrubber-drier excels due to a full array of innovative elements, significantly contributing to efficiency in maintenance cleaning. The highlights of this innovative machine concept include the patent-pending Wetrok Power Whirl based on advanced suction nozzle technology. It generates an optimally-controlled suction whirl that leaves the cleaned area absolutely dry with lower energy consumption. The unique Touch'n'Clean handle enables automatic start-stop operation, which makes the machine even easier, and above all, safer to use. The Duomatic Esprit features a 55-litre fresh water tank with an integrated water pump. Filling is quick and convenient, thanks to the Quick-Refill attachment with a hose coupling and automatic power cut-off. Simple controls that are easy to understand, the continuously adjustable upright handle and the powerful Self-Drive allow for ergonomic and fatigue-free working conditions.
