

Granuline: in the wake of granulate power

The dawn of a new era in cleaning. Granuline will revolutionise the cleaning market. Never before has a water-free cleaning product delivered such stunning results. Each individual granule contains concentrated cleaning power. This power is unleashed when the granulate is dissolved in water. In cold water. But how does this patent-protected new product actually work?

So sensational that we had to patent it

Until now, only liquid cleaning products contained the substances needed for high-quality cleaning. No water-less cleaning products on the market were able to deliver comparable results. Until now. After years of intensive research, Wetrok has succeeded in developing a highly effective granulate. The procedure is so unique that it is patent-protected.

Works just like a magnet

Granuline works just like a magnet. A magnet attracts certain bodies. The molecules in the granulate attract dirt particles in the same way. And that's not all. They lock away these particles in the cleaning solution. How it works: Step one: solid active cleaning substances (detergents) are combined with electrosteric molecules to form a solid basis. Step two: the detergents come into play. They moisten the surface and draw dirt particles directly into the cleaning solution. Step three: the product really starts making waves. The electrosteric molecules permanently lock away the dirt in the solution. For unbeatable triple power.

Wetrok Granuline
Riding the crest of a wave

Granulate power, that is making waves

Wetrok has made the impossible possible: a whole new family of products based entirely on granulate, Granuline. These products offer maximum cleaning power at minimum weight. Just imagine how little space you need for a small box of sticks compared to several large liquid containers. It's time to say goodbye to extortionate storage costs and lugging around heavy containers.

Performance giant – Storage dwarf

Imagine if you could reduce the weight of your 10-litre chemical container by 95%. This is no longer just a pipe dream. Our Granuline products do away with having to lug heavy containers from A to B.

Granuline is also a step ahead when it comes to volume. The compact little boxes of sticks reduce storage space requirements by up to 75%. When was the last time you were able to reduce your storage costs that drastically?

Granuline: Three granulate giants

The Granuline family consists of three patent-protected granulate cleaners: Granufloor floor maintenance cleaner, Granusan sanitary maintenance cleaner and Granusurf surface cleaner. Packaged as handy sticks (single portions), they help ease the burden of daily cleaning. With granulate there is no risk of eyes and skin coming into contact with chemical substances. Less chemicals benefits the environment and also means more safety and comfort for your cleaning staff.

100% dosing accuracy

With our Granuline sticks, you can finally forget about complicated dosage systems. One stick contains the right amount of cleaning agent for a foam bottle or a bucket. For 100% dosing accuracy – guaranteed. As easy to use as coffee capsules.

Environmental responsibility

It is no accident that the word „granulate“ is almost an anagram of „natural“. Exact dosing means a lot less chemicals go to waste. You don't even have to recycle containers any more. All of our granulate products are solvent-free, which means no fumes. Great news for both your cleaning staff and the environment!

Transparent consumption

One stick equals one application. Whether you're cleaning daily or weekly, you always know exactly how many sticks are required and the costs for each object. Calculating your costs has never been this easy!

Safety for cleaning personnel

The sticks are easily opened by tearing along the perforation and the content is then simply added to the foam bottle or water bucket. It is virtually impossible for the granulate to come into contact with the eyes or skin. The products are solvent-free, meaning there are no fumes to inhale. There is no danger of spillage with granulate. The perfect solution for an all-round safer work environment.

Say goodbye to heavy containers! Another advantage: You will significantly reduce your storage and transport costs. Having many small sticks also allows for flexibility in terms of room distribution like never before. When are you going to jump on the granulate power bandwagon?

Manual foam cleaning – the secret to saving resources

Want to save time and money, but not at the expense of cleaning quality? Impossible until now. The effective manual foam cleaning method is the answer. This method uses no more chemicals or water than needed. Not a drop goes to waste.

No spray particles in the air, no water bucket to carry around and no cloths to wring out. Our Wetrok foam bottle with clearly visible dosing instructions makes preparing the foam simple and safe. Simply apply the foam in the form of cross to a microfibre cloth. The foam then spreads evenly across the surface being cleaned.

Wetrok manual foam cleaning – an ecological breakthrough with economical benefits.

Wetrok Granuline: an award-winning innovation

A jury of independent experts selected Wetrok Granuline as the winning product for the cleaning agents category of the CMS Purus Innovation Award 2017.

During the cleaning trade fair CMS in Berlin, the innovation prize is awarded to exceptionally intelligent solutions.

Winning the prize is considered a true accolade in the cleaning industry but it stands for more than that: Products by Wetrok are characterised by state-of-the-art technology. Most of all, however, they enable an easier working life for their users.
